

Modernizing healthcare technology while keeping critical systems running

Specialized expertise and technology-delivery solutions to support healthcare modernization, systems integration, cybersecurity, and operational continuity.

Healthcare technology leaders must advance modernization and integration initiatives while maintaining the reliability and security of systems that support healthcare operations.

Procom Technology Consulting helps organizations address these challenges through specialized technology expertise, defined project delivery, and dedicated support capacity — bringing the capabilities needed to assess, modernize, integrate, and maintain critical technology environments.

— THE PRESSURES

Ransomware and cybersecurity pressure on the healthcare sector, which the Canadian Centre for Cyber Security has documented directly affecting Canadian hospitals in recent years.

Provincial health-system restructuring, alongside private-sector M&A in long-term care, home care, and pharmaceutical manufacturing — both creating integration and technology-synergy work on top of an already full roadmap.

Modernizing aging clinical and administrative technology while keeping critical systems running.

Integrating systems, applications, and health information across a growing technology footprint.

Canadian hospitals have been directly affected by ransomware — including Toronto's SickKids Hospital in December 2022 and five Southern Ontario hospitals in October 2023.

— WHAT WE HELP YOU DO

Assess a technology environment and define a practical modernization plan.

Modernize and migrate legacy applications and platforms to the cloud.

Strengthen software quality through test automation and release validation.

Support ongoing platform operations and maintenance.

Add specialized expertise or delivery capacity for integration or security initiatives.

— EXPERIENCE SUPPORTING COMPLEX HEALTHCARE TECHNOLOGY ENVIRONMENTS

Our technology delivery experience includes modernizing legacy healthcare platforms, migrating applications to the cloud, strengthening software quality through automated testing, and providing ongoing support for critical data-exchange environments.

We bring this experience to healthcare organizations seeking specialized expertise, defined project delivery, or ongoing technology support.

— WHY PROCOM

45+ years

working across banking, energy, insurance, manufacturing, technology, and other complex, regulated industries — the same depth of experience we bring to healthcare's modernization, security, and integration challenges.

Let's talk

What's the one technology initiative on your roadmap that would benefit most from an outside perspective?
